RWI-HC-011 — CFB Wainwright training area, 1 June to 2 November 2026: fires, spread, suppression and temporary installations

Ad hoc hindcast requested 2 Nov 2026, separate from RWI-HC-010 (October). Box 52.50–52.95 N, 111.35–110.55 W. Sources: NASA FIRMS (all satellites, 80 detections), 48 Sentinel-2 passes (12 mostly clear) measured as a 20 m stack with burn dating, 10 m true-colour chips, ERA5 weather, and the adsb.lol flight archive within 60–80 km on every fire day. Public reporting checked 2 Nov 2026. **Times UTC, MDT (UTC−6) beside.** LLM-assisted analysis; boundaries are read from the imagery, not from an official map.

Held for the RWI journalist desk — this hindcast. Released automatically on **3 Dec 2026 03:30 UTC**, or released manually earlier. To receive status updates on this report, use the link on its page at rogerwilcoimagery.com. Journalist holds are either due to tasking or to sensitive, potentially personal identifiers that we must review before releasing to the public.
